

PAIN Module 1 Self Assessment

1. What are three components of the TMJ?
2. Name three main components that form the extra oral examination in TMD
3. Which imaging is used for general screening in TMD
4. What is central sensitisation
5. Which statement is true
 - a) C-fibres are smallest of the myelinated fibres
 - b) C-fibres are unmyelinated
 - c) Nociceptors are stimulated before threshold is reached
 - d) C-fibres are 2-5um with fast conduction
6. Resultant chronic pain is a function of: Name 4 things (4 marks)
7. In trigeminal Neuralgia patient pain intensity will more often be described as
 - a) 5/10
 - b) 7-8/10
 - c) 11/10
 - d) 3-4/10
8. Which is false about Cluster headaches
 - a) Also called migrainous neuralgia
 - b) Affects men more than woman
 - c) Usually bilateral pain
 - d) Described as sharp shooting pain
9. Name 3 types of neurovascular pain
10. Which is true
 - a. OPG forms a good technique for excluding pathology of TMJ and surrounding structures in the diagnosis of TMD
 - b. MRI is used for reviewing bone structure of the TMJs
 - c. MRI will help with confirming of disc abnormalities of the TMJs
 - d. CT scan is good for reviewing bone structures
 - e. a,b,c,d, are true
 - f. a,c and d are true
